EDUCATION

University of Miami

Expected May 2028

B.S., Data Science & Artificial Intelligence | Minor in Mathematics

EXPERIENCE

Product Growth Associate | Everly

Sep 2026 - Present

- Onboarded 10+ early users for an AI-powered health app; continue gathering feedback and supporting users to inform product changes and growth ahead of public launch.
- Help implement feature and usability improvements across the app and website, working directly with founders and developers to turn user feedback into prioritized product changes.

Product & Technology Intern | Thunderbird Labs

Jun - Aug 2026

- Built and handed off a full-stack client portal for project tracking, billing visibility, and communication; the team is expanding it for deployment across multiple client companies.
- Created reusable starter repositories and standardized AI-assisted development guidelines used across multiple client projects, reducing repeated authentication, configuration, and application setup work.
- Integrated an open-source codebase-indexing tool into multiple client projects, enabling developers and AI coding assistants to locate relevant code and navigate unfamiliar repositories.
- Connected Better Stack and Sentry to Linear, automatically turning production errors into actionable tickets with debugging context.

Manufacturing Operations Assistant | Unit Industries

Jan 2024 - Jan 2025

- Supported inventory tracking, assembly, and order fulfillment for aerospace and commercial manufacturing customers; used Excel and shipment checks to maintain order accuracy.

PROJECTS

Human Performance Analytics Platform

Jan - Sep 2026

Public demo: jack-codet-human-performance.vercel.app

- Built and deployed a performance analytics platform connecting 4 APIs (WHOOOP, Strava, Canvas LMS, and Telegram) with calendar data to track recovery, training, and academic workload.
- Developed personalized readiness scoring to guide daily training intensity, with historical baselines and missing-data handling; integrated the OpenAI API to turn free-text check-ins into validated, structured inputs.
- Trained Python/scikit-learn regression models to explore fitness and recovery relationships, evaluating predictions on a chronological holdout set.
- Shipped cognitive-load tracking across the database, REST API, and React interface, with 19 automated tests; published an interactive demo with synthetic data.

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript, TypeScript, Java

Frameworks & Data: React, Next.js, FastAPI, scikit-learn, SQLite, REST APIs, OpenAI API

Tools: Git/GitHub, Railway, Sentry, Better Stack, Linear, Excel
